

Haïti: Economic recovery strategy

Ambassade d'Haïti à Londres/ 3rd Haitian European Diaspora Dinner
Business Conference

Fritz Duroseau

Member of the Board
Banque de la République d'Haïti

December 2, 2017
London

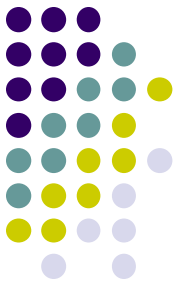

Outline

- Factors leading to economic growth;
- Haitian economic context;
- BRH Financial incentives to investment;
- Proposal of a diaspora investment strategy;
- Conclusion.

Factors leading to growth

- The growth process targets an improved welfare: rise in GDP per capita;
- Production factors: Physical, Human, Intangible (Knowhow, cumulated expertises, branding);
- Productivity of human and physical capital positively correlated to technological progress;
- Growth can be led by consumption (public & private), exports, investment (public & private);
- Investment depends on domestic and international savings;

Factors leading to growth

- A growth strategy is not a quick-fix/ miracle-cure :
 - Identification and minimization of constraints, identification and maximization of opportunities;
- Iterative public policies adapted to the local context provide better results than “copy and paste” policies. However common denominators are found for countries with similar characteristics and similar problems;
- South-Korea, exporter for 600 million USD of primary goods in 1963,

Factors leading to growth: example

- Today, after implementing key outward-oriented policies and reforms, exports more than 600 Billion USD of goods ;
- Its export-led public policies targetted FDI (conglomerates): Samsung stages of development: 1)Trade agency, 2)food processing, 3)textile, 4)Insurance, 5)electronics, 6) Naval construction, 7)engineering, 8)construction, 9)aerospace;
- Its per capita GDP, 146,00\$ in 1963 to 27,538.00\$ in 2016;

Factors leading to growth: example

- FDI is more stable/ long term risk taking decision : Digicel 1st taxpayer ;
- FDI comes with capital, new knowhow including new technologies, new demand, connections to international networks (hotels to tourism networks, airlines, car rentals, etc) ;
- FDI may contribute to some public infrastructure projects;

Economic context

| GDP Per capita | Macroeconomic framework | Data from BOP |
|--|---|---|
| <ul style="list-style-type: none">• Haïti's annual per capita GDP inferior to 800 dollars;• Average GDP growth of 1,4% for the past 5 decades while average demographic growth of 1,8%; | <ul style="list-style-type: none">• Relatively stable macroeconomic framework since 2004;• Sound financial sector: profitable, liquid, well capitalized;• Improvements in the socio-political climate since 2004; | <ul style="list-style-type: none">• Net importer of goods and services: vulnerable to external shocks (natural, prices);• Diaspora contributes to growth via the sending of remittances (2,4 billion USD, 25% of GDP, superior to international aid). New contributions from Chile;• Remittances finance mostly consumption goods, education services and imports |

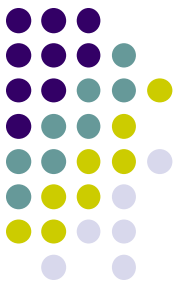

Economic context

Competitive/ high potential sectors already identified by studies

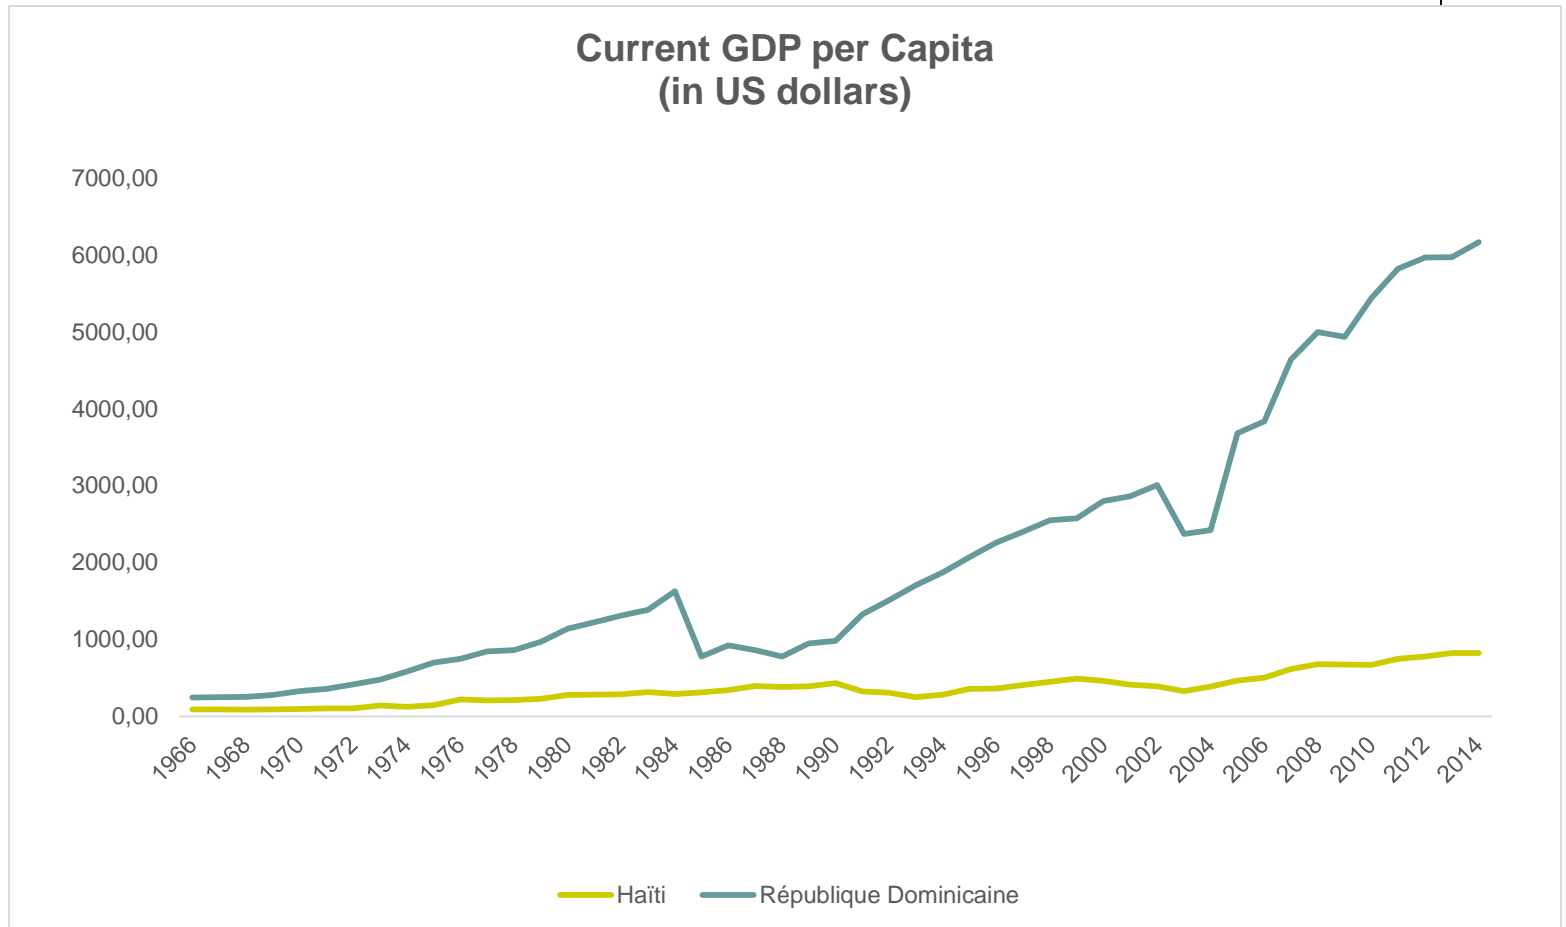

some agricultural value-chains, tourism, textile, construction, infrastructure, renewable energies, BPOs: Collier, DSNCRP, National Commission on competitiveness;

What should be done

The quality and the volume of public investment should be improved in order to maximize its catalyst effect on private investment: advocacy toward multilateral and bilateral donors and better cost-benefit analysis of public projects;

Economic context

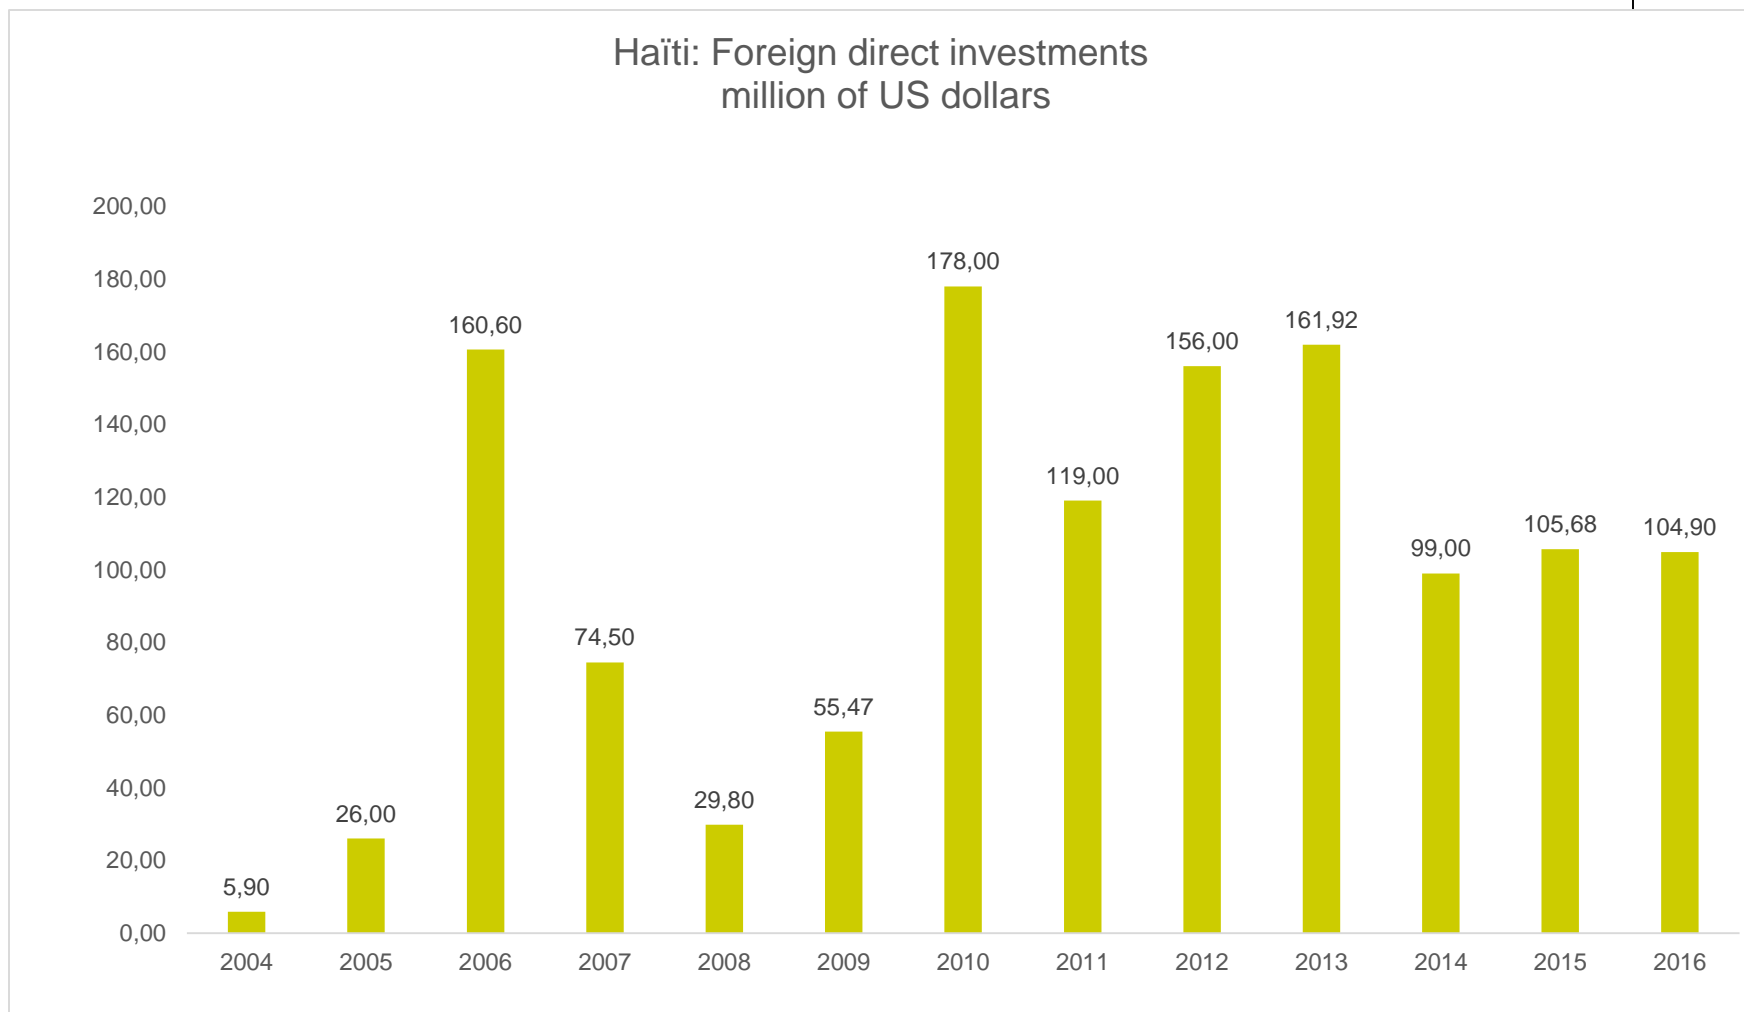

Economic context

Foreign direct investments
Million of US dollars

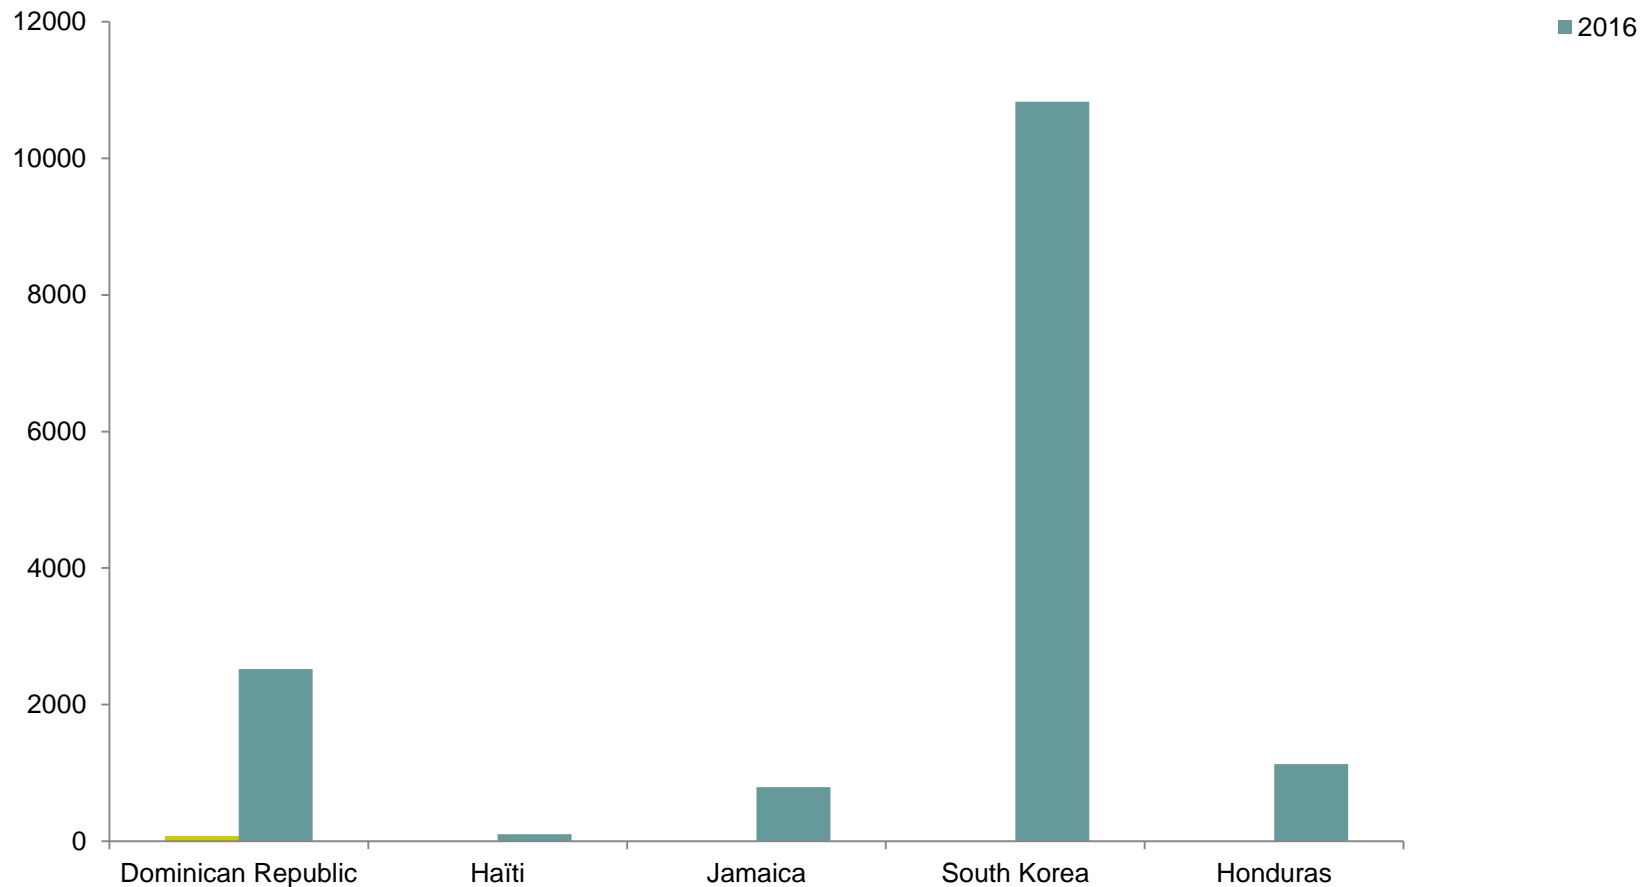

Economic context

Foreign direct Investments net (million of USD: Worldbank)

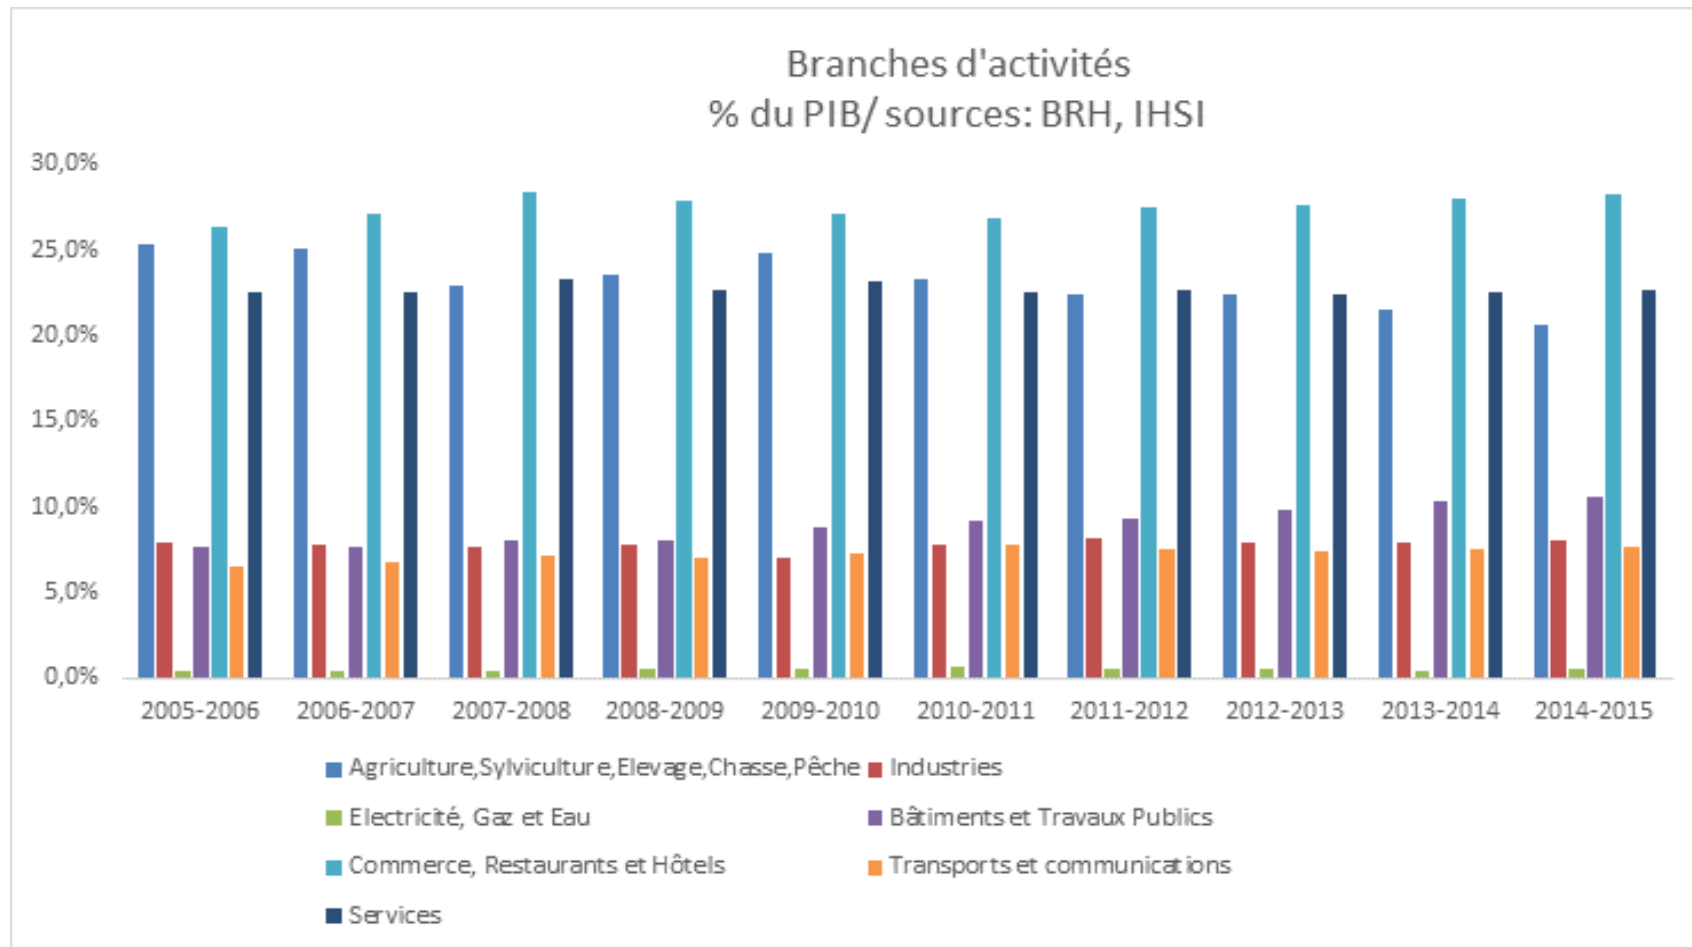

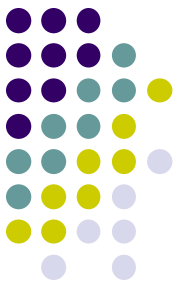

GDP per capita (current USD: Worldbank)

Economic context

Financial incentives to investment

Financials mechanisms established by BRH

Apart from the existing fiscal incentives to investment (National Investment Code), BRH has established a set of financial mechanisms that :

- ease the cost of credit
- improve access to finance for : housing, hotels, assembly, agriculture, exports;

Commitment of BRH

- BRH is committed to extend these mechanisms to other sectors with high potential;
- BRH also facilitates the organisation of sectoral round tables to identify and minimize the impediments to their development. To date we've supported, at the request of the MARNDR, the following round tables: Eggs, chicken poultry, moringa, rice, cocoa were considered;

BRH Financial Incentives

Housing

0% legal reserves on bank resources financing housing;

- Refinancing window for banks at BRH: rate 1% to 3%, 20 to 30 Yr term
- Interest rate on mortgages: 8% to 10% fix in gourdes, 10 Yr term
- Construction, acquisition, renovation

Industrial free zones

- Construction of new industrial space/ textile HOPE/HELP
- Refinancing window at BRH to banks
- Fix interest rate on loans: maximum 7% annual

Export firms

- Refinancing window at BRH to FDI and SOFIDHES: 1) account receivables; 2) Refinancing to enhance productive capacity (Capex)
- Fix interest rate on loans: Max. 5% annual (AR), Max 6% annual (Capex);

BRH Financial Incentives

Tourism and Hospitality services (hotels)

- 0% legal reserves on bank resources financing tourism and hospitality projects
- Facility to restructure existing loans and provisioning rate of 5% compared to 50% for other restructured loans;
- Construction and renovation

Agriculture and Agro-industry

- 0% legal reserves on bank resources financing agriculture production and transformation

Investment strategy/ diaspora

Avoid tiny individual investment: low capital, vulnerable to shocks, poor infrastructure (overheads: security, electricity, accounting, audit, legal fees, too costly);

Regional diaspora associations can support municipalities (technical and financial) in policy design, implementation and in infrastructure investments that can lead to competitiveness gains and to improvements in the business climate;

Partner with American and multinational firms to take advantage of the opportunities in the identified high potential sectors;

Investment strategy/ diaspora

Implement projects that meet a certain demand from the diaspora: gated communities, retirement communities, cultural services, transportation, etc;

Private equity investment via long term capital injections or acquisition of shares and participation to the governance of:

- Start-ups;
- Existing projects in need of capital in order to expand;
- Firms experiencing financial and governance problems;
- Firms that are in the process of being sold or transferred;
- Venture capital investments;

Investment strategy/ diaspora

Explore international sources of funding and submit viable projects: private sector windows offered by multilateral agencies, IIC, IFC, etc;

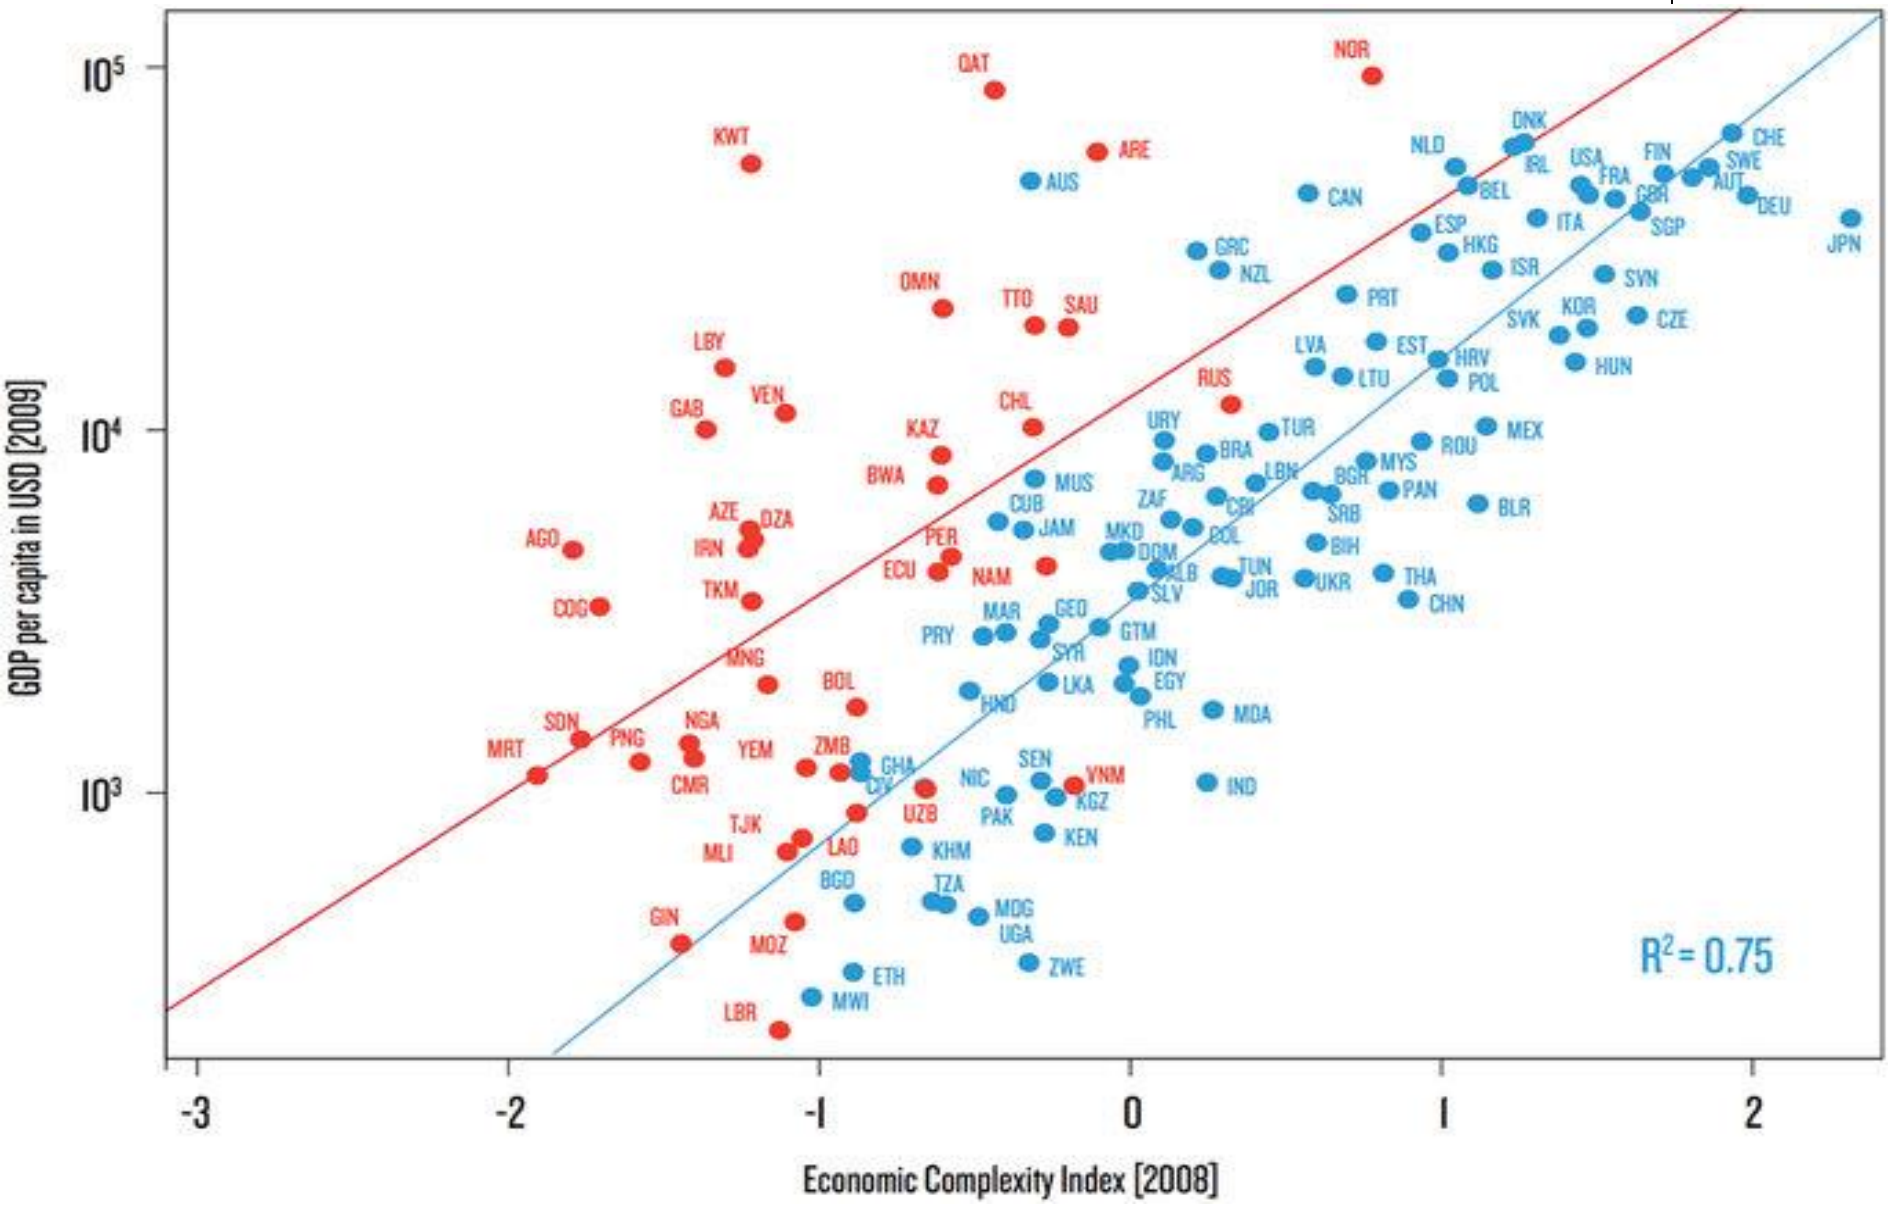

Invest in coherence with the public investment program of the Haitian authorities;

Invest in risk mitigation mechanisms: crop insurance against natural or other hazards;

Conclusion

- BRH committed to extend the incentive mechanisms to real estate developers and agriculture clusters;
- The quest for FDI flows is an absolute must for any country experiencing negative national savings;
- Investments in capital and knowhow from the diaspora can enhance the competitiveness of local firms and play a key role in economic diversification and resilience to shocks;
- The diaspora strategy should put the emphasis on complex economic sectors (case of Sweden wood) less vulnerable to competition and with high value-added;
- Opportunities in the aforementioned sectors and in import substitution (agriculture, food processing, pharmaceuticals) should be maximized by the diaspora;

Conclusion

- Worldbank 2016 data: GDP per capita of outward oriented economies in the region:
 - The Bahamas, 23124.0 USD,
 - Barbados 16097.0 USD;
 - Jamaica 4868.0 USD,
 - Dominican Republic 6722.0 USD: inferior to 1000 USD in 1990. Post-90's performance highly correlated to FDIs. Quite diversified, not as vulnerable to natural disasters as Haïti (Agriculture) and other caribbean islands with high dependency on tourism revenues;
 - Actions mentioned previously will create a virtuous circle of prosperity that will put Haiti back on the international map and impulse the appetite of foreign direct investors;

Thank You
